

## Description

---

This template — is the original author's vision of how the page "Coming Soon" or "Under construction" should look like. Nice combination of colors, unobtrusive animation — all combine to attract the attention of visitors and your customers to your project. No coding knowledge required. Buying this item you'll get easily customizable well commented page with responsive design and valid HTML5. Countdown jQuery script, subscription form with email validation and social buttons with sexy hover effect.

## Files Structure

---

css	Contains .css files. There are original Bootstrap 2.3.1 files and general style.css. For more information about Bootstrap Framework please visit <a href="#">Bootstrap Official Page</a>
fonts	Contains GrablauSans Font. Here is <a href="#">official page</a>
images	Contains all images for page
js	Contains all JavaScript files – jQuery plugins and their compressed (so called “minimal”) versions. Do not even try to modify it.
Index.html	Our main page
save.php	File for connection and processing form directly to MySQL. Open file in Notepad or any other software for editing text files and edit database_name, database_password and database_name with parameters your hosting company provides you
base.sql	SQL dump for creation table in your MySQL Database. Run PHPMyAdmin or any other server software for work with MySQL. Choose your database, and import base.sql to your database.

## Recommendations

---

Company Logo (logo.img) files should be PNG24 image file format with transparent background. Dimension sizes can be different, but default size is 200\*48 pixels. It is strongly recommended that your custom logo should be solid white or black color.

## JS Comments and notices

---

To change countdown target date you should find this code in scripts.js:

Line 30: `austDay = new Date(austDay.getFullYear() + 0, 12 - 1, 31);`

That code means our target date is 31 December 2013. Here is another example – First man in space anniversary will be at 12 April 2013. Our code will be the next:

`austDay = new Date(austDay.getFullYear() + 0, 4 - 1, 12);`

For more explanation and description how countdown working please visit [Keith Wood Official page](#).
